Louisiana Science

Grades 9, 10, 11, 12

Adopted 2017

Motion and Stability: Forces and Interactions	**HS-PS2-1.**	**Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration.** HS-PS2-1
	HS-PS2-2.	**Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when there is no net force on the system.** HS-PS2-2
	HS-PS2-3.	**Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.** HS-PS2-3
	HS-PS2-4.	**Use mathematical representations of Newton's Law of Gravitation and Coulomb's Law to describe and predict the gravitational and electrostatic forces between objects.** HS-PS2-4
	HS-PS2-5.	**Plan and conduct an investigation to provide evidence that an electric current can produce a magnetic field and that a changing magnetic field can produce an electric current.** HS-PS2-5
	HS-PS2-6.	**Communicate scientific and technical information about why the atomic-level, subatomic-level, and/or molecular level structure is important in the functioning of designed materials.** HS-PS2-6
Energy	**HS-PS3-1.**	**Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.** HS-PS3-1
	HS-PS3-2.	**Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as a combination of energy associated with the motions of particles/objects and energy associated with the relative positions of particles/objects** HS-PS3-2
	HS-PS3-3.	**Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.** HS-PS3-3
	PS3-4.	**Plan and conduct an investigation to provide evidence that the transfer of thermal energy when two components of different temperature are combined within a closed system results in a more uniform energy**

Skip to main content

		distribution among the components in the system (second law of thermodynamics). HS-PS3-4
	HS-PS3-5.	Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction. HS-PS3-5
	HS-PS3-6.	Evaluate the validity and reliability of claims in published materials about the viability of nuclear power as a source of alternative energy relative to other forms of energy (e.g., fossil fuels, wind, solar, geothermal). HS-PS3-6
Waves and their Applications	**HS-PS4-1.**	Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media. HS-PS4-1
	HS-PS4-4.	Evaluate the validity and reliability of claims in published materials regarding the effects that different frequencies of electromagnetic radiation have when absorbed by matter. HS-PS4-4
Matter and its Interactions	**HS-PS1-1.**	Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level and the composition of the nucleus of atoms. HS-PS1-1
	HS-PS1-2.	Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, and knowledge of the patterns of chemical properties. HS-PS1-2
	HS-PS1-3.	Plan and conduct an investigation to gather evidence to compare the structure of substances at the macroscale to infer the strength of electrical forces between particles. HS-PS1-3
	HS-PS1-4.	Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy. HS-PS1-4
	HS-PS1-5.	Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs. HS-PS1-5
	HS-PS1-6.	Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium. HS-PS1-6
	HS-PS1-7.	Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction. HS-PS1-7

Skip to main content

	HS-PS1-8. Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay. HS-PS1-8
Waves and their Applications In Technologies For Information Transfer	**HS-PS4-3.** Evaluate the claims, evidence, and reasoning behind the idea that electromagnetic radiation can be described either by a wave model or a particle model, and that for some situations one model is more useful than the other. HS-PS4-3
Heredity: Inheritance and Variation of Traits	**HS-LS3-1.** Formulate, refine, and evaluate questions to clarify relationships about the role of DNA and chromosomes in coding the instructions for characteristic traits passed from parents to offspring. HS-LS3-1
	HS-LS3-2. Make and defend a claim based on evidence that inheritable genetic variations may result from: (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors HS-LS3-2
	HS-LS3-3. Apply concepts of statistics and probability to explain the variation and distribution of expressed traits in a population. HS-LS3-3
Ecosystems: Interactions, Energy, and Dynamics	**HS-LS2-1.** Use mathematical and/or computational representations to support explanations of factors that affect carrying capacity, biodiversity and populations of ecosystems at different scales. HS-LS2-1
	HS-LS2-4. Use mathematical representations to support claims for the cycling of matter and flow of energy among organisms in an ecosystem. HS-LS2-4
	HS-LS2-6. Evaluate the claims, evidence and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem. HS-LS2-6
	HS-LS2-7. Design, evaluate, and refine a solution for reducing the impacts of human activities on the environment and biodiversity. HS-LS2-7
Biological Evolution: Unity and Diversity	**HS-LS4-1.** Analyze and interpret scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence. HS-LS4-1
	HS-LS4-2. Construct an explanation based on evidence that biological diversity is influenced by (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment. HS-LS4-2

Skip to main content

	HS-LS4-3. Apply concepts of statistics and probability to support explanations that populations of organisms adapt when an advantageous heritable trait increases in proportion to organisms lacking this trait. HS-LS4-3
	HS-LS4-4. Construct an explanation based on evidence for how natural selection and other mechanisms lead to genetic changes in populations. HS-LS4-4
	HS-LS4-5. Evaluate evidence supporting claims that changes in environmental conditions can affect the distribution of traits in a population causing: (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species. HS-LS4-5
From Molecules to Organisms: Structures and Processes	**HS-LS1-1.** Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins which carry out the essential functions of life through systems of specialized cells. HS-LS1-1
	HS-LS1-2. Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms. HS-LS1-2
	HS-LS1-3. Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis in living organisms. HS-LS1-3
	HS-LS1-4. Use a model to illustrate the role of the cell cycle and differentiation in producing and maintaining complex organisms. HS-LS1-4
	HS-LS1-5. Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy. HS-LS1-5
	HS-LS1-6. Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules. HS-LS1-6
	HS-LS1-7. Use a model to illustrate that cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and the bonds in new compounds are formed, resulting in a net transfer of energy. HS-LS1-7
	HS-LS1-8. Obtain, evaluate, and communicate information about (1) viral and bacterial reproduction and adaptation, (2) the body's primary defenses against infection, and (3) how these features impact the design of effective treatment. HS-LS1-8
Earth's Systems	**HS-ESS2-1.** Develop a model to illustrate how Earth's internal and surface processes operate at different spatial and temporal scales to form continental and ocean-floor features. HS-ESS2-1

Skip to main content

	HS-ESS2-2.	**Analyze geoscience data to make the claim that one change to Earth's surface can create feedbacks that cause changes to other Earth's systems.** HS-ESS2-2
	HS-ESS2-3.	**Develop a model based on evidence of Earth's interior to describe the cycling of matter by thermal convection.** HS-ESS2-3
	HS-ESS2-4.	**Analyze and interpret data to explore how variations in the flow of energy into and out of Earth's systems result in changes in atmosphere and climate.** HS-ESS2-4
	HS-ESS2-5.	**Plan and conduct an investigation on the properties of water and its effects on Earth materials and surface processes.** HS-ESS2-5
	HS-ESS2-6.	**Develop a quantitative model to describe the cycling of carbon among the hydrosphere, atmosphere, geosphere, and biosphere.** HS-ESS2-6
	HS-ESS2-7.	**Construct an argument based on evidence about the simultaneous coevolution of Earth systems and life on Earth.** HS-ESS2-7
Earth's Place in the Universe	**HS-ESS1-1.**	**Develop a model based on evidence to illustrate the life span of the sun and the role of nuclear fusion in the sun's core to release energy that eventually reaches Earth in the form of radiation.** HS-ESS1-1
	HS-ESS1-3.	**Communicate scientific ideas about the way stars, over their life cycle, produce elements.** HS-ESS1-3
	HS-ESS1-4.	**Use mathematical or computational representations to predict the motion of orbiting objects in the solar system.** HS-ESS1-4
	HS-ESS1-5.	**Evaluate evidence of the past and current movements of continental and oceanic crust and the theory of plate tectonics to explain the ages of crustal rocks.** HS-ESS1-5
Space Systems	**HS-ESS1-2.**	**Construct an explanation of the Big Bang theory based on astronomical evidence of light spectra, motion of distant galaxies, and composition of matter in the universe.** HS-ESS1-2
History of Earth	**HS-ESS1-6.**	**Apply scientific reasoning and evidence from ancient Earth materials, meteorites, and other planetary surfaces to construct an account of Earth's formation and early history.** HS-ESS1-6
Human Sustainability	**HS-ESS3-1.**	**Construct an explanation based on evidence for how the availability of natural resources, occurrence of natural hazards, and changes in climate have influenced human activity.** HS-ESS3-1
	ESS3-2.	**Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources based on cost-benefit ratios.** HS-

Skip to main content

		ESS3-2
	HS-ESS3-3.	**Create a computational simulation to illustrate the relationships among management of natural resources, the sustainability of human populations, and biodiversity.** HS-ESS3-3
	HS-ESS3-4.	**Evaluate or refine a technological solution that reduces impacts of human activities on natural systems.** HS-ESS3-4
	HS-ESS3-5.	**Analyze geoscience data and the results from global climate models to make an evidence-based forecast of the current rate of global or regional climate change and associated future impacts to Earth systems.** HS-ESS3-5
	HS-ESS3-6.	**Use a computational representation to illustrate the relationships among Earth systems and how those relationships are being modified due to human activity.** HS-ESS3-6
Resources and Resource Management	**HS-EVS1-1.**	**Analyze and interpret data to identify the factors that affect sustainable development and natural resource management in Louisiana.** HS-EVS1-1
	HS-EVS1-2.	**Obtain, evaluate and communicate information on the effectiveness of management or conservation practices for one of Louisiana's natural resources with respect to common considerations such as social, economic, technological, and influencing political factors over the past 50 years.** HS-EVS1-2
	HS-EVS1-3.	**Analyze and interpret data about the consequences of environmental decisions to determine the risk-benefit values of actions and practices implemented for selected issues.** HS-EVS1-3
Environmental Awareness and Protection	**HS-EVS2-1.**	**Design and evaluate a solution to limit the introduction of non-point source pollution into state waterways.** HS-EVS2-1
	HS-EVS2-2.	**Use a model to predict the effects that pollution as a limiting factor has on an organism's population density.** HS-EVS2-2
	HS-EVS2-3.	**Use multiple lines of evidence to construct an argument addressing the negative impacts that introduced organisms have on Louisiana's native species.** HS-EVS2-3
Personal Responsibilities	**HS-EVS3-1.**	**Construct and evaluate arguments about the positive and negative consequences of using disposable resources versus reusable resources.** HS-EVS3-1
